

MICROSOFT PATTERN - DEC 2005

Hai,

I hav attended for the same and gone thru till interview but didnt make there good enough but i will guide u with my experience.

Steps r..

1) Written test of one hour which include

cat type of aptitude question which can be handled easely and in same section u will be asked even some puzels like make 4 lines in 3 by 3

dots by covering all the dots. something of these sort will be asked. these r some wat hard in this section.

Next part is c-lang which is the most important. For me they asked tricky pointers questions and some questions based on short circuit

evaluation etc. if u can make well here then ur thru witten test.

There will be individual cutoff in both the section.

Roughly abt 30% will be selected. so becarefull here.

2) Group Discussion

This is second elimination round. roughly around 2-3 ppl will be selected among grp of 10.

Good communication skills r very necessary.

For me topic is: IMPACT OF INTERNET ON SOCIETY.

3) Personal Interview.

If u r here then u shul not expect tat u will be selected. They will be asking abt projects tat u hav done. I didnt do any project as i am just abt to

enter 4th year of my b-tech. So here i lost the process. Go prepared with any project even if u hav not done.

Generaly microsoft ppl will be taking abt 30 students for intenship during a year. they will be conducting recruitment process for 4 times a year n i

think urs is last one. so be carefull.
